

FWDP 1000 – Web Development 1

Assignment #4

Due Date: End of day. Have the instructor look at the files or upload today's folder to the Learning Hub.

Marks: 10 points. See the rubric in the Learning Hub for details.

Tasks

1. Open products.html and products.css in your code editor.
 - a. These are already in your "day-04" folder.
2. Download the example screenshots and replicate the design.
 - a. There are two screenshots: mobile and desktop.
 - b. Complete the mobile styling before moving on to the desktop styling.
 - c. Do **NOT** worry about making it pixel perfect!
3. Do not edit the HTML file to complete the assignment, only the products.css file.
4. Some suggestions...
 - a. Copy the styles from the Header section in news.css, paste it into the Header section of products.css. After you copy that CSS...
 - i. Find the **.site-navigation ul** selector and change the value of **top** from 8rem to 4.5rem, or whatever works with your code.
 - ii. Later in that header code you will find a line-height set to 8rem. Change that to match whatever value you just set above.
 - iii. Modify any of that header code as needed.
 - b. Look at the HTML and figure out the structure of the page when it comes time to do the desktop layout. Use the class names you see in the HTML.
 - c. You should have display: flex; appearing five times in your stylesheet: twice in your header, twice in your main content, once in your footer.
