FWDP 1000 – Web Development 1

Assignment #3

<u>Due Date</u>: End of day. Have the instructor look at the files or upload today's folder to the Learning Hub.

<u>Marks</u>: 10 points. See the rubric in the Learning Hub for details.

Tasks

1. Add the services.html file into your "day-03" folder.
2. Open services.html in your code editor.
3. Create a services.css file.
4. Attach the normalize.css file we created in class and the services.css file to services.html.
5. Download the example screenshot and replicate the design.
   a. Do **NOT** worry about making it pixel perfect!
6. Style the links on the page using the four pseudo-selectors we learned today.
   a. Make the :visited color the same as the default link color
   b. Make the :hover and :focus styles change the link color
   c. Make the :focus style also add an outline
   d. Make the :active style change the color and the background-color
7. Here are some hints to help you along:
   a. The example has a max-width on the body of 31.25rem (500px).
   b. The "Email Us Today" element is a normal "mailto" link styled to look like a button.
   c. You can use your own images or use the provided ones. If you download your own, crop them to be 300px by 300px to match the design.
   d. The images are square but use a CSS property to make them appear round. The CSS property you want is related to the "border" property. Google to find it!
   e. Google to find out how to remove the underline for <a> tags. Do this for only the links in the header navigation.
